

Frontend assignment - Headless commerce

The mission is to create an headless e-commerce website.

You can choose any headless CMS you like, but there is a ready made template for DatoCMS (<https://www.datocms.com>).

Use the following link to create a new project in DatoCMS with prepopulated content:

<https://dashboard.datocms.com/clone?projectId=44803&name=Consid+Commerce>

With DateCMS you can use their GraphQL based Content API for fetch data.

Here is a link to the documentation from DatoCMS:

<https://www.datocms.com/docs>

Requirements

- Use Next.js (<https://nextjs.org/>)
- Use a headless CMS (see information above)
- The site must contain at least 1 editorial/content page (e.g. "About us")
- The site must contain at least 1 product listing page
- The site must contain product pages

Extras

- Build a shopping basket with a tool like Redux (<https://redux.js.org/>)
- Build a checkout page with the possibility to perform a purchase (it's enough with a buy-button that triggers some sort of confirmation page)
- Build a confirmation page that is shown after a purchase

Problems?

If you occur any problems or have any questions regarding the assignment, please contact:

Johan Runesson

Submission

Put the code on Github or similar service so we can reach it, alternative create a zip-file with the project and send it to your contact person.

Attach a short description of your thought process of the solution and describe the choices you have made.
